

Amendments to the Specification

Please replace the second full paragraph on page 4 with the following:

It is preferred in the imaging lens of the present invention that when a total focal distance of the imaging lens is f , a focal distance of the first lens is f_1 , a distance from an incident surface of the first lens on the object side to an imaging surface ~~of the first lens~~ is Σd , and an Abbe number of the second lens is νd_2 , the following conditional expressions are satisfied.

$$0.50 < f_1/f < 1.5 \quad (1)$$

$$0.50 < \Sigma d/f < 1.5 \quad (2)$$

$$50 > \nu d_2 \quad (3)$$
